Baldwin launches new PureFiltration Compact technology at parts2clean in Stuttgart, Germany

Sustainable fluid management system specializes in filtration quality and flow

Baldwin's PureFiltration systems with self-cleaning filters increase the fluids' life cycle process, minimize chemical waste and lower the operating costs.

ST. LOUIS — Oct. 4, 2018 — Baldwin Technology Company Inc.—a world-leading provider of technologies that improve the economic and environmental efficiency of production processes—is pleased to announce that it will showcase its new PureFiltration Compact system at parts2clean, held Oct. 23 to 25, 2018, in Stuttgart, Germany (hall 5, booth A11).

Baldwin's environmentally friendly PureFiltration systems, part of the company's fluid management solutions, continually clean process fluids for the metal and glass industries, among other industries. With self-cleaning filters, this technology increases the lifecycle of process fluids and minimizes chemical waste, while also lowering operating costs and enhancing workplace safety.

To meet the market demand for high-quality and efficient filtration systems for smaller machine applications, Baldwin has developed the new PureFiltration Compact system, which also increases the lifecycle of process fluids but in a smaller footprint.

"We are excited to showcase our innovative PureFiltration Compact system and educate the industry about our technologies," said Bernhard Brandmeier, Business Segment Leader at Baldwin. "Our goal is to help our customers minimize their environmental footprint, as well as increase their productivity and quality. At Baldwin, we care about and believe in building a better world."
